DETAILED ACTION

Response to Amendment

Claim Objections

The objection to claims 17-18 are withdrawn in light of the amendments filed on 8/29/2007.

Claim 10 is objected to because of the following informalities: The amendments to claim 10 are not clear because the connector itself is rotatable, not the step of positioning the connector. The examiner suggests incorporating the new limitation of "rotation while the cannula is at the subcutaneous position" into the "wherein adjusting the position of the delivery tubing" clause. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

E/25/2(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-14, 26-27, 31-38, and 40 are rejected under 35 U.S.C. 102(e) as being fretation anticipated by Kihara et al. (6,579,265). Kihara discloses an infusion set comprising a the pocitibase (41,42), a cannula (4in or 4out) connected to and extending away from the base, a connector (24) removably attached to the base, a tubing (5in or 5out), wherein the connector is rotatable on the base to more than 5 degrees and less than 360 degrees form the

arultar

around a perpendicular axis when attached to the base, wherein the connector comprises at least one stop (45,49,50) for inhibiting rotation, and wherein a contiguous passage for passing fluids is formed from the tubing to the cannula when the connector is removably attached to the base, wherein the base comprises barriers (43,44) extending away from the surface of the base, wherein the stop extends away from a surface of the connector, wherein the barrier is disposed around the circumference of the base to restrict movement of the stop when the connector is rotated about the base, and wherein the connector can be attachable to the base in a plurality of different connection positions wherein the stop can be placed in different intervals between the two barriers, wherein the connector is at least partially rotatable when the cannula is inserted subcutaneously and free to rotate to any degree when the cannula is not inserted subcutaneously.

extending

Response to Arguments

Surface

Applicant's arguments filed 8/29/2007 have been fully considered but they are the base, not persuasive. In response to the applicant's argument that Kihara does not disclose a and where connector that is rotatable on the base while the cannula is at the subcutaneous connectic position, the examiner respectfully disagrees. The connector is at least partially

rotatable when the cannula is inserted subcutaneously and free to rotate to any degree to construct when not inserted. Claim 15 is allowed because it recites the range of rotation while the

inserted sincerted at a subcutaneous position.

Art Unit: 3763

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Theodore J. Stigell whose telephone number is 571-272-8759. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

information regarding the status of an application may be obtained from the a 350 in Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
